

## The NT has the smallest and youngest population of any state or territory<sup>1</sup>

- By 2035–36, Darwin's population is expected to grow at 1.2 per cent per year while the rest-of-Northern Territory will have a growth rate of only 0.04 per cent per year.
- Only 29,000 residents are expected to be added to the population of the Northern Territory over the next decade. The Northern Territory's growth rate means that its already small population is getting smaller relative to other states and territories.
- The Northern Territory is expected to have the youngest population with a median age of 36.3 years by 2035–36.
- Most of the Northern Territory's population growth is expected to be driven by natural increase, with only a small amount of growth from net overseas migration. The Northern Territory's population growth is offset by net interstate migration outflows.
- Like Western Australia, the Northern Territory experiences migration fluctuations at the beginning and end of major mining projects.

<sup>1</sup> All insights refer to over the projection period (2024–25 to 2065–66) unless otherwise specified. The main data source for these projections is the Australian Bureau of Statistics (ABS), *National, state and territory population, March 2025*, released in September 2025. After the projections in this statement were prepared, the ABS released the *National, state and territory population, June 2025*.

Source: ABS, *National, state and territory population, March 2025*; ABS, *Regional population, 2023–24*; and Centre for Population.

2 The Greater Capital City Statistical Area (GCCSA) population statistics are from ABS, *Regional population, 2023–24*, released on 27 March 2025. These estimates do not sum to the state and territory estimates largely due to the implementation of the net interstate migration review, released by the ABS on 19 June 2025. Corresponding sub-state revisions will be included in the next scheduled release of *Regional population, 2024–25*, on 31 March 2026.

3 Estimates beyond 2035–36 are experimental.

4 The total fertility rates for greater capital city and rest-of-state areas have been estimated for 2023–24.
